## **TERMS OF USE**

Do not alter, modify, copy, or otherwise misappropriate any Fike product, whether in whole or in part. Fike assumes no responsibility for any losses incurred by you or third parties arising from such alteration, modification, copy or otherwise misappropriation of Fike products.

Do not use any Fike products for any application for which it is not intended. Fike shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Fike product for which the product is not intended by Fike.

You should install and use the Fike products described in this document within the range specified by Fike, especially with respect to the product application, maximum ratings, operating supply voltage range, installation and other product characteristics. Fike shall have no liability for malfunctions or damages arising out of the use of Fike products beyond such specified ranges.

You should install and use the Fike products described in this document in compliance with all applicable laws, standards, and regulations. Fike assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.

It is the responsibility of the buyer or distributor of Fike products, who distributes, disposes of, or otherwise places the product with a third party, to notify such third party in advance of the contents and conditions set forth in this document. Fike assumes no responsibility for any losses incurred by you or third parties as a result of unauthorized use of Fike products.

## **QUALITY NOTICE**

Fike has maintained ISO 9001 certification since 1996. Prior to shipment, we thoroughly test our products and review our documentation to assure the highest quality in all respects.

### 1.0 ABOUT THIS MANUAL

This document identifies the notification appliances that Fike has chosen to offer with our standard product lines. Not all devices offered by the manufacturer are listed in this document; however, NAC devices from the same manufacturer that meet the requirements stated in Section 2.0 shall be compatible.

Specific information for each device is not listed in this manual. Please refer to the data sheet and/or the installation instruction sheet for each device for specifications.

### 2.0 RELATED DOCUMENTATION

Further details about the components referenced in this guide can be found in the following manuals.

### 3.0 NOTIFICATION APPLIANCE CIRCUIT LIMITATIONS

The notification appliance circuits (NAC) provided on Fike’s control panels, addressable control module, amplifier, and remote power supply (RPS) are designed to be compatible with standard polarity reversal notification appliances rated for 16-33 VDC. Each NAC is capable of supplying 24 VDC power output to connected devices. Refer to the associated control panel manual for circuit ratings.

**CAUTION:** There are several devices listed in this document that are capable of operating on 12 VDC or 24/115/120 VAC. These devices shall not be connected to any of Fike’s NAC circuits. They should be powered either by a battery backed, regulated, power-limited, power supply listed for fire protective signaling use or by an AC circuit supervised accordingly.

#### 3.1 VOLTAGE DROP CALCULATIONS

Voltage drop calculations shall be performed for each notification appliance circuit in order to verify that the voltage supplied at the last device on the circuit does not drop below its minimum operating voltage. Refer to manufacturer’s literature for the devices being used for maximum device current draw.

The following table has been provided to allow you to estimate the maximum allowable circuit impedance based on the total current draw of all devices connected to the circuit. First, determine the maximum amount of current flowing through the circuit; then use the following table to find the corresponding maximum impedance allowed for the circuit wiring based on a maximum circuit voltage drop of 2.4 volts.

Max. Current (amps):	0.1	0.2	0.3	0.4	0.5	0.6	0.8	1.0	1.5	2.0	2.5	3.0
Max. Impedance (ohms):	24	12	8	6	4.8	4.0	3.0	2.4	1.6	1.2	0.96	0.8

**Note:** Speakers shall not be connected to NAC circuits. Speakers shall be connected to amplifier speaker circuits only.

### 3.2 STROBE SYNCHRONIZATION (SYNC)

The notification appliance circuits (NAC) provided on Fike’s control panels, voice system amplifier, and remote power supply (RPS) are capable of generating the sync pulse used by Wheelock, Gentex, and System Sensor devices to provide synchronized activation (simultaneous flashing) of all strobe devices. See table below.

Fike Synchronization Capabilities			
	Gentex	System Sensor	Wheelock
Panel NAC	✓	✓	
Amplifier NAC	✓	✓	
RPS NAC	✓	✓	✓

In addition, each notification appliance manufacturer offers sync modules that can be interfaced with the notification appliance circuit to generate the required sync pulse.

- Wheelock (SM-12/24-R and DSM-12/24-R)
- Gentex (AVS44 and AVSM)
- System Sensor (MDL)

### 3.3 MODULATED OUTPUTS

The notification appliance circuits (NAC) provided on Fike’s control panels, voice system amplifier, remote power supply (RPS), and addressable control modules are capable of producing a modulated (pulsed) output. The modulation is intended for use only with the audible portion of the notification appliance. Do not connect a strobe to a modulated output, as they require continuous power for proper operation.
