

## ARGON PRE-ENGINEERED DUST COLLECTOR NOZZLE

### DESCRIPTION

The Vent Nozzle is used to control the discharge of agent into the protected hazard. The engineered hole size in each nozzle, ensures the proper amount of agent is delivered in the required amount of time.

The Vent Nozzle flange mounting kit is used to mount a vent nozzle to the mounting surface of a Dust Collector or ductwork. A Teflon® sealing disc is included for the purpose of preventing the discharge orifice from becoming obstructed when the nozzle is used in a dirty environment. A new sealing disc will be required after each system discharge.

### SPECIFICATIONS

Part Number:	IG71-248 Vent Nozzle C02-1181 Strainer C80-1025 Flange Kit C80-1011 Seal Disc
Material:	Brass Nozzle Stainless Steel Strainer Stainless Steel Mounting Flange Teflon® Disc
