

PROINERT®2 MANIFOLD PRESSURE VENT

Description

The manifold pressure vent is a pressure relief device designed to vent small amounts of leakage from a closed manifold and piping configuration per NFPA 2001. This prevents pressure from building within the closed manifold and pipe section that could subsequently provide enough backpressure to open the cylinder valves.

NOTE: An insignificant amount of agent leakage will occur through the pressure vent during a system discharge.

Specifications

Part Number	C02-1363
Material	Brass Body
Thread Size	½" NPT Male

Approvals

Underwriters Laboratories (UL)
 Underwriters Laboratories of Canada (ULC)
 Factory Mutual (FM)
