Introduction

The UV-IR flame detector provides ultra-fast response, high performance and reliable detection of a large variety of fires including hydrocarbon fires (visible and non- visible), as well as Hydrogen fires. The detector addresses slow growing fires as well as fast eruptions of fire using improved UV-IR technology. The detector operates in all weather and light conditions.

Key Benefits

- High immunity to false alarm
- Hydrogen and Hydrocarbons flame detection.
- Ultra-fast detection mode detection within 5 milliseconds for fireballs or explosions
- High sensitivity – up to 100 ft. (30m) for a 1 ft² (0.1m²) n-heptane pan fire
- Data/Event logger – alarms, faults and other relevant events are logged to non-volatile memory
- Built-in-Test (BIT) – Automatic and manual internal self-test of window cleanliness and the overall operation of the detector
- Window heater to avoid condensation and icing
- Tilt mounting bracket can be connected either above or below the detector
- UV and IR warning levels – 0-20mA – Current output warning when elevated UV or IR radiation is detected
